Innovation, expertise & efficiency since 1888

IMS *Inventory Management Systems*

IMS is a warehouse management system (WMS) that automates the inventory management and supply chain within a warehouse or distribution centre.

By integrating IMS with barcode scanners, mobile computers, wireless LANs, and radio frequency identification (RFID) technology, IMS provides accurate real-time tracking of products' movement and storage. Standard functionality includes inventory collection and storage processes, manual and automated picking, and tracking items to be shipped. IMS records and tracks every stock item received, picked, packed, and shipped.

STREAMLINE

Warehouse operations for production or products, receiving, put-away, picking, packing, and shipping.

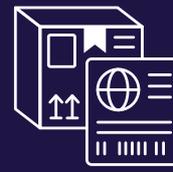

OPTIMISE

Stock-flow and warehouse floor space that includes automated replenishment based on your inventory methods, such as LIFO and FIFO

REAL-TIME

Data on your inventory via barcoding, batches, serial numbers, and RFID tagging.

INTEGRATE

Consignment manifests with Australia Post, Direct Freight, StarTrack and other carriers.

MULTI-SITE

Inventory management across different locations with centralised control.

IMS is ideal for small to medium enterprises that currently rely on paper tracking of inventory movements or require a cost effective solution where IMS software is configured to align with your business processes. Also, IMS suits third-party logistics operations that manage inventory for their customers.

IMS optimises and streamlines the supply chain process, including reducing picking mistakes, increasing productivity, and optimising warehouse space utilisation.

Flexibility. Local expertise & support. One partner.

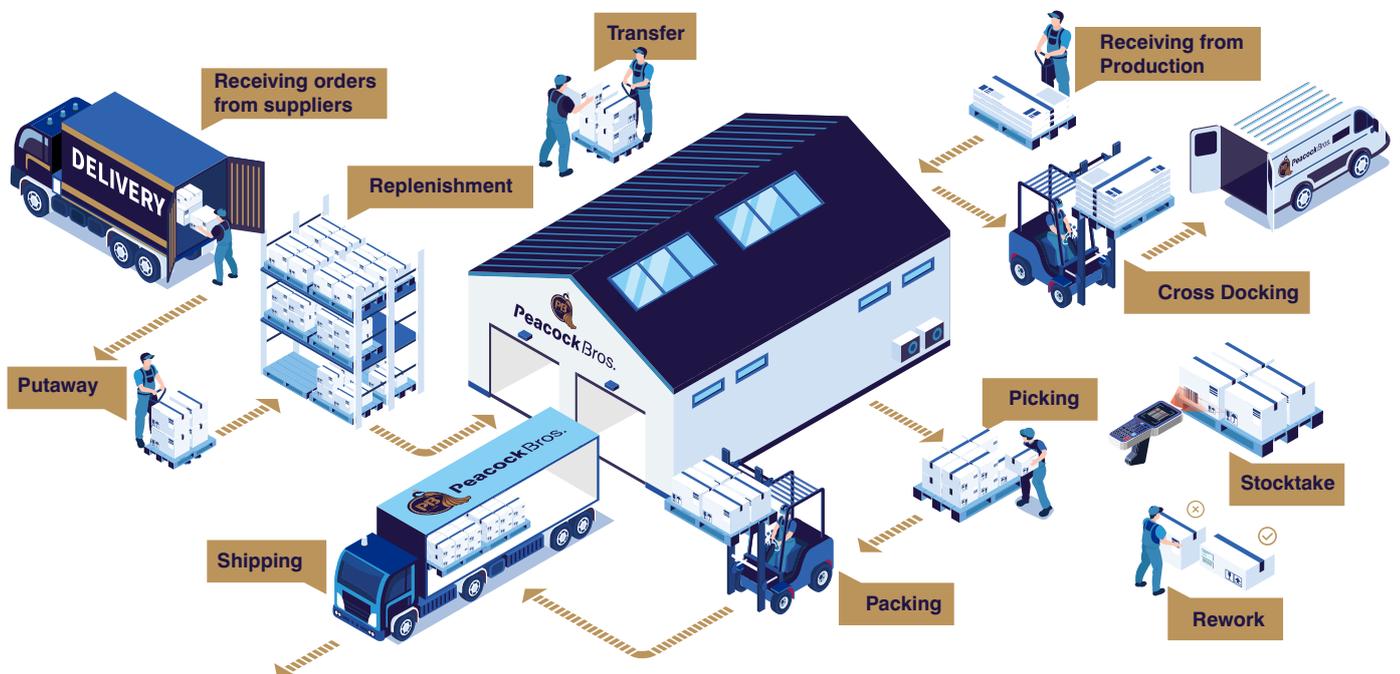

Peacock Bros. IMS is designed and built as a highly configurable warehouse management solution with the flexibility to adapt to your business processes compared to being forced to change your business processes to match the in-built software of standard warehouse management systems or enterprise resource planning systems.

Our Australian Head Office provides local support to Australia and New Zealand clients. Support includes consulting services, help desk & phone support with our Technical support team, and regular IMS updates that include new features to reflect current industry practice.

By aligning the IMS software functionality to your business processes and partnering with an Australian based provider of supply chain software, hardware and products, your business can maximise productivity gains, lower warehouse operating expenses, and provide better customer service.

Core modules within IMS

In 1888, brothers Ernest and Charles Peacock opened a small general printing business on Collins Street in Melbourne. Later that year Ernest took over the business, and in the years to follow Peacock Bros. would grow into one of the largest manufacturers and suppliers of high quality printed labels, tags and packaging solutions across Australia and New Zealand.

Today, we are an organisation at the forefront of innovation with a longevity that can be attributed to our collaborative, team-based approach to delivering solutions. Continually evolving, we have now become a market-leading provider of supply chain solutions across the region.

Australian owned and operated, we pride ourselves on going above and beyond the expectations of our 12,000+ customers. We've done it for 130+ years and counting, so what can we now do for you?
